(54) ELECTRONIC COMPONENT

(57)Abstract:

PROBLEM TO BE SOLVED: To provide an electronic component which can have a dielectric constant higher than that of the prior art, a small size, a high performance, an excellent overall electrical characteristic, can suppress fluctuations in dielectric constant between lots, can suppress the wear of a die, and can exhibit a high breakdown voltage.

SOLUTION: The electronic component is made of a composite dielectric material having dielectrics of a circle, flat circle or ellipse at least in projection shape dispersed in resin.

LEGAL STATUS

[Date of request for examination] 19.06.2002

[Date of sending the examiner's decision of rejection] 09.12.2003

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection] 2004-00641

[Date of requesting appeal against examiner's decision of rejection] 08.01.2004
